'No CIA Link to Kennedy Killing'

Washington

No link has been found to connect the Central Intelligence Agency to the assassination of President John F. Kennedy nor is there believable evidence that he was shot by more than one gunman, the Rockefeller Commission reported yesterday.

The commission [illegible] theories surrounding the Nov. 22, 1963, murder of President Kennedy in Dallas, Tex.

A detailed analysis of movie film taken at the moment of the shooting and a re-examination of the records of the Kennedy autopsy disprove a contention that the President was killed by a sniper hiding in front of the presidential motorcade, the report said.

It also rejected claims that E. Howard Hunt and Frank Sturgis, later to become involved in the Watergate scandal, were placed at the murder scene by photographic evidence.

The Rockefeller commission also said there is no credible evidence showing that the CIA had any connection whatsoever with Lee Harvey Oswald, identified by the Warren Commission as Kennedy's assassin, or with Jack Ruby, the Dallas nightclub owner who shot and killed Oswald.

Critics of the Warren Commission report have long contended that an analysis of the movie film of the murder casts doubt on the conclusion that Kennedy

[illegible] during [illegible] of the [illegible] a win[illegible] of the [illegible] Dallas.

"The film clearly shows that the movement of the President's head and body backward and to the left is consistent only with a shot that came from the [illegible] that is, from the direction of the grassy knoll," the commission report noted.

The report said that a freshly assembled panel of medical and scientific experts is unanimous in its finding that Kennedy was struck by only two bullets, both of which were fired from the rear "and that there is no medical evidence to support a contention that the President was struck by any bullet [illegible] other direction.

"They were [illegible] ous in finding [illegible] backward and [illegible] tion of the President's body following [illegible] was not [illegible] pact of a bullet [illegible] the front or right [illegible]" the report said.

It said three doctors on the panel reported that such a motion would be caused by a violent straightening and stiffening of the entire body as a result of a seizure-like neuromuscular reaction to major damage inflicted to nerve centers in the brain."

One panel member, Dr. Alfred G. Oliver, director of the Department of Biophysics at Edgewood Arsenal, Aberdeen Proving Grounds, Md., said that the violent motions of the President's body, "could not possibly have been caused by the impact of the bullet."

"He attributed the popular misconception on this subject to the dramatic effects employed in television and motion picture productions," the report said.

The panel said that Dr. John K. Latimer of New York City, experimenting with test animals, said medical evidence is conclusive that the President was not hit from the front or right front.

Latimer used a Mannlicher-Carcano 6.5 millimeter rifle of the same model found by the Warren Commission to belong to Oswald and ammunition from the same [illegible] and [illegible] [illegible] to have been [illegible] by Oswald.

"The results, he said, confirmed both the head injuries shown in the autopsy photographs and X-rays.
